FOREWORD

The **W H Smith/Collins English Dictionary** provides a balanced and up-to-date survey of contemporary English arranged in a format and style which make it easy to use. It follows the practice established in the Collins range of dictionaries of placing today's most common or basic meaning at the beginning of the entry, with historical or less familiar senses following. Its generous extent — over one million words of text and 71,000 references — ensures, however, that in addition to its emphasis on modernity there is excellent coverage of older, rarer, regional, technical, or otherwise specialist senses of words.

The Dictionary is designed to make it easy and quick for the user to find the required information. All vocabulary items, including compound words, abbreviations, and anglicized foreign words, are to be found as main entries in a single alphabetical listing. Thus, *aid*, *A.I.D.*, *aide*, *aide-de-camp*, *AIDS* all appear as main-entry words in alphabetical sequence. The only items that are placed within another entry are idiomatic phrases and derived words that consist of the main word with a standard ending; for instance, at the main entry *help*, the idiomatic phrases *cannot help but* and *so help me*, and the derived word *helper*, are included. But *helpful*, *helping*, *helpless*, *helpmate*, *helpmeet*, and *help out*, are entered separately and defined. The result of this policy is an avoidance of long, complicated paragraph entries.

The definitions are written in clear, direct English, and are in many cases augmented by examples of the word in context. The different meanings of each word are numbered, and this, together with a generous provision of labels (*Maths*, *Computers*, *Bible*, *Linguistics*, and so on) helps to guide the user to the particular meaning sought. Advice on how words are used is shown, in brackets, at many individual definitions, and special Usage Notes are provided on points which have proved difficult or controversial (see, eg, *may*¹). Further help is given by showing the pronunciation of every main-entry word, in the International Phonetic Alphabet (a key to which may be found on pages viii and ix), and by the inclusion of all irregularly spelt noun plurals and verb forms.

The result is a book that meets the requirements of those who want a comprehensive dictionary relevant to today's needs, edited for speed and ease of use, and computer set in large, clear type and spacious layout.

Using the Dictionary

The following Notes are provided to help the reader to use the dictionary more efficiently and to find the required information more quickly.

1. Order of definitions

As a general rule, when a word has more than one meaning, the one commonest in current use is placed first. Subsequent definitions are arranged so as to give a full and coherent account of the meaning. Technical meanings usually follow general meanings; old and obsolete meanings follow technical meanings; idioms and phrases are generally placed last. But note that fixed noun phrases and certain other invariable idioms like *dark horse*, *mail order*, and *mind's eye* are given full headword status.

2. Units

In accordance with the recommendations of the International Standards Organization, all scientific measurements are given in SI units (*Système International d'Unités*). Measurements and quantities in more traditional units are often given as well.

3. Abbreviations, etc.

Abbreviations, acronyms, and symbols are treated as entries in their alphabetical place.

4. Parts of speech

In addition to the traditional parts of speech — adjective, adverb, conjunction, interjection, noun, preposition, pronoun, verb — the following less traditional parts of speech have been adopted to give additional precision.

determiner. This denotes such words as *the*, *a*, *some*, *any*, *that*, *this*, possessives like *my*, *his*, and *your*, and the numerals. Many determiners can have a pronoun function without change of meaning, and this is shown thus:

some (sʌm; unstressed səm) *determiner*

2.a. an unknown or unspecified quantity or amount of: *he owns some horses*. **b.** (as pronoun; functioning as sing. or pl.): *we'll buy some*

sentence connector. This denotes words like *however* and *therefore* which have been traditionally classed as adverbs but which function as conjunctions, linking sentences, without being restricted, as are conjunctions, to the initial position in their clause.

sentence substitute. Sentence substitutes comprise words such as *yes*, *no*, *perhaps*, *definitely*, and *maybe*, which can stand as meaningful utterances by themselves.

5. Additional information

- (i) Some adjectives and determiners are restricted by usage to a particular position relative to the nouns they qualify. This is indicated by the following labels:

postpositive (used predicatively or after the noun, but not before the noun):

ablaze (ə'bleɪz) *adj.* (*postpositive*), *adv.*
1. on fire, burning

immediately postpositive (always used immediately following the noun qualified and never used predicatively):

galore (gə'lɔː) *determiner*. (*immediately postpositive*) *Inf.* in great numbers or quantity: *there were daffodils galore in the park*

prenominal (used before the noun, and never used predicatively):

chief (tʃiːf) . . . ~*adj.* **3.** (*prenominal*) **a.** most important; principal. **b.** highest in rank or authority.

- (ii) Adjectives and adverbs that perform an exclusively intensifying function, with no addition of meaning, are described as (*intensifier*) without further explanation.

blooming ('bluːmɪŋ) *adv.*, *adj.* *Brit. inf.* (*intensifier*): *a blooming genius*; *blooming painful*

- (iii) A noun that is commonly used with adjectival force is labelled *modifier*.

If the sense of the modifier is strictly inferable from the sense of the noun, the modifier is shown without further explanation, with an example to illustrate its use; otherwise an account of its meaning and/or usage is given in a separate numbered definition.

key¹ (ki:) *n.* . . . **18.** (*modifier*) of great importance: *a key issue.* . . .

- (iv) Verbal constructions consisting of a verb and a preposition or adverb are given as main entries in their alphabetical place if the meaning cannot be deduced from the separate meanings of the component parts. Examples are: *play up, take for, take on, take up.*
- (v) *Derog.* (*Derogatory*). This label implies that the connotations of a word are unpleasant with intent on the part of the speaker or writer.
- (vi) *Offens.* (*Offensive*). This label indicates that

a word may be regarded as offensive by the person described or referred to, even if the speaker uses the word without any malicious intention.

6. Listed entries

In English many easily understandable words are formed by adding productive prefixes, such as *non-*, *over-*, *un-*, etc., to existing words. Words of this kind are listed in bold type, without definition, at the foot of the page on which they would occur in alphabetical sequence.

7. Usage notes

A brief note introduced by the label **Usage** and the marginal sign ▷ has been added at the end of a number of entries in order to comment on matters of usage. These comments are based on the observed practice or preference of the majority of educated speakers and writers.

Pronunciation Key

The pronunciations shown for the vocabulary of standard English are those common in educated British English speech. The symbols used are those of the International Phonetic Alphabet. The following consonant symbols have their usual English values: *b, d, f, h, k, l, m, n, p, r, s, t, v, w, z*. The remaining symbols and their interpretations are listed below. Though they may appear strange at first, a little practice soon makes their use perfectly familiar. The gain in precision and lack of ambiguity repay the degree of effort involved.

Stress

Three grades of stress are shown in the transcriptions by the presence or absence of marks placed immediately *before* the affected syllable. Primary or strong stress is shown by ' , while secondary or weak stress is shown by . Unstressed syllables are not marked. In *photographic* (fəʊtə'græfɪk), for example, the first syllable carries secondary stress and the third primary stress, while the second and fourth are unstressed.

Notes

(i) Though words like *castle, path, fast* are shown as pronounced with an /ɑ:/ sound, many speakers use an /æ/. Such variations are acceptable and are to be assumed by the reader.

(ii) The letter "r" in some positions is not sounded in the speech of Southern England and elsewhere. However, many speakers in other areas do sound the "r" in such positions with varying degrees of distinctness. Again, such variations are to be assumed, and in such words as *fern, fear, arm* the reader will sound or not sound the "r" according to his speech habits.

(iii) Though the widely received pronunciation of words like *which, why* is with a simple /w/ sound and is so shown in the dictionary, many speakers, in Scotland and elsewhere, preserve an aspirated sound: /hw/. Once again this variation is to be assumed.
